

PORTFOLIO · SELECTED WORK 2024–2026

Davin Jonathan Tanus

AI & Mobile Software Engineer — Information Systems, ITS

I build mobile and intelligent products end to end: a cross-platform asset-management app, an on-device-ready image classifier, a deployed RAG academic assistant, and rigorously evaluated ML systems. I enjoy challenge-based teamwork, turning user problems into shipped products with thoughtful experiences and measurable results.

Inside: Profile & education · Featured mobile, AI & software projects with outcomes · Leadership & achievements · Technical skills · Selected certifications

PROFILE

Information Systems undergraduate at Institut Teknologi Sepuluh Nopember (GPA 3.64/4.00) and AI Engineer Intern at PT Salam Pacific Indonesia Lines. My work spans **mobile development (React Native/Expo)**, full-stack engineering, **on-device-ready machine learning**, and applied AI products. I work in Agile teams, evaluate rigorously, and care about shipping products people actually use.

EDUCATION

Institut Teknologi Sepuluh Nopember (ITS)

Bachelor's Degree in Information Systems · Aug 2023 – Present · GPA 3.64/4.00

- Relevant areas: software engineering, data analytics, machine learning, IS/IT strategy, IT risk and service management.
- 2nd Place — Information Systems Programming Competition (HMSI ITS, 2024).

AI Engineer Intern — PT Salam Pacific Indonesia Lines

Applied AI & Full-Stack Engineering · 2026 – Present

- Build internal document-intelligence and talent-development platforms (Next.js, FastAPI/Go, PostgreSQL/MySQL, Docker) with secure access flows, testing, and reporting.

TECHNICAL SKILLS

Mobile: React Native / Expo (cross-platform app: registry, lifecycle tracking, role-based access, audit logs)

AI & Machine Learning: TensorFlow, PyTorch, scikit-learn, transfer learning, BiLSTM, time-series forecasting, on-device deployment (TensorFlow Lite, TensorFlow.js, SavedModel)

Software & Data: JavaScript, Python, SQL, Go · React, Next.js, FastAPI, Streamlit, REST APIs · PostgreSQL, MySQL, Supabase, MongoDB

Cloud, DevOps & Ways of Working: Docker, GCP + Cloud Run, GitHub Actions CI/CD, Git · Agile Scrum/Kanban, product-oriented delivery

LEADERSHIP & ACHIEVEMENTS

Project Lead — Agile Snacklicious

Scrum/Kanban delivery · Cross-functional team

- Led sprint planning, backlog grooming, and retrospectives to deliver milestones on time.

Intern Staff — HMSI ITS (Information Systems Student Association)

Sep 2024 – Dec 2024

2nd Place — IS Programming Competition

HMSI ITS · 2024

FEATURED PROJECTS — MOBILE & ON-DEVICE INTELLIGENCE

AssetHub — Mobile Asset Management App [GitHub](#) | [Case study](#)

Role: Mobile developer · Cross-platform (React Native / Expo)

- **Problem:** enterprises need asset tracking beyond the desk — registry, lifecycle states, and accountability on the go.
- **Approach:** built searchable asset registry with filters, lifecycle tracking (Active, Maintenance, Borrowed), role-based access, and audit logs.
- **Outcome:** working cross-platform app delivered alongside a deployed web counterpart with shared access-control model.

[React Native](#)[Expo](#)[Role-Based Access](#)[Audit Logs](#)

Multi-Class Image Classification with On-Device Export [Training notebook](#) | [Case study](#)

Role: ML engineer · Decoding deep-learning project

- **Problem:** accurate image recognition that can run beyond the lab — server, mobile, and browser.
- **Approach:** MobileNetV2 transfer learning on 13,394 Imagenette images (10 classes, 80/10/10 split), augmentation, staged fine-tuning, checkpointing; evaluated with learning curves, confusion matrix, per-class metrics.
- **Outcome:** 91.67% test accuracy; model exported to SavedModel, TensorFlow Lite (mobile), and TensorFlow.js (browser).

[TensorFlow](#)[MobileNetV2](#)[Transfer Learning](#)[TFLite](#)[TensorFlow.js](#)

RAG Akademik — AI Chatbot for Campus Regulations [Live application](#) | [GitHub](#)

Role: Builder · Deployed product

- **Problem:** students struggle to find answers across dozens of academic regulation documents.
- **Approach:** retrieval-augmented generation over 30+ indexed documents with semantic search and pre-computed embeddings for fast, grounded answers.
- **Outcome:** live assistant answering policy questions (SKS limits, thesis, GPA, scholarships, graduation).

FEATURED PROJECTS — ML RIGOR & ENGINEERING DEPTH

Indonesian App Review Sentiment Analysis [Training notebook](#) | [Case study](#)

Role: ML engineer · Dicoding NLP project · 16,000+ self-scraped reviews

- **Problem:** distill thousands of Indonesian app reviews into product signal (positive / neutral / negative).
- **Approach:** slang normalization, sentiment-aware preprocessing, deduplication, class balancing; benchmarked LinearSVC, logistic regression, and a PyTorch BiLSTM with per-class and confusion-matrix analysis.
- **Outcome:** 92.17% test accuracy with a repeatable inference module.

NLP

Scikit-Learn

PyTorch BiLSTM

Text Classification

Stock Price Forecasting — Classical ML, Deep Learning & Chronos-2

[Classical notebook](#) | [Chronos-2 notebook](#)

Role: ML engineer · 10 years of UNTR.JK data

- **Problem:** compare classical, deep, and foundation-model forecasting under realistic trading simulation.
- **Approach:** rolling walk-forward validation and residual diagnostics across ARIMA, Prophet, XGBoost, LSTM, and zero-shot Amazon Chronos-2 (120M).
- **Outcome:** custom LSTM at 1.04% MAPE; honest analysis of zero-shot limits (48.28% directional accuracy).

Time Series

LSTM

XGBoost

Foundation Model

Conduit — Full CI/CD Pipeline on Google Cloud [GitHub](#) | [Case study](#)

Role: DevOps implementer

- **Problem:** ship a Laravel app with production-grade automation instead of manual deploys.
- **Approach:** Docker containerization, GitHub Actions pipeline with secrets management, deploy to Cloud Run via Artifact Registry, PHPUnit quality gates, MongoDB backend, Grafana-oriented monitoring.
- **Outcome:** reproducible container-to-cloud pipeline demonstrating deployment discipline.

Docker

GCP

GitHub Actions

Laravel

SELECTED CERTIFICATIONS

Belajar Fundamental Deep Learning — Dicoding Indonesia (Sep 2026)

Computer vision, NLP, evaluation, deployment workflows

Cisco DevNet Associate — Cisco Networking Academy × ITS (Jul 2026)

APIs, automation, application security, testing, cloud deployment

AWS AI Academy — Basic & Beginner — Dicoding × AWS (Aug 2026)

AI foundations on cloud infrastructure

LangChain Academy Foundations — LangChain, LangGraph, LangSmith (Aug 2026)

LLM applications, agentic workflows, deployment operations

Full archive (24 certifications + learning activities with verification documents): portfolio-liard-ten.vercel.app/credentials

MORE SELECTED WORK

AssetHub Web (React + Supabase, live), Environmental Data ETL, BCA KPI dashboards, Banana-Quality clustering (K-Means + PCA), IT risk management, IS/IT strategic planning, and computer-vision simulation — all documented with reports and previews at portfolio-liard-ten.vercel.app/project.

Let's build something people love to use.

I learn fast, collaborate in Agile teams, and finish what I start — from model notebook to deployed product. Reach me at davinjtanus@gmail.com or [LinkedIn](#).

All projects link to live evidence: notebooks, repositories, applications, and reports.
